Web development

React Development

Description

Facebook created React to build a robust, dynamic platform that could adapt to continually changing data. To date, this JavaScript library fuels countless websites and applications across industries.

You will learn to leverage React's power in this hand-on, project-based course. You will build your own web application and compile a professional project portfolio to showcase your new skills.

According to Stack Overflow, the React JavaScript library is the one "most developers want to work with if they don't already." Employers are in search of talent who can leverage React's ability to handle constantly changing data inputs. And there's not enough talent on the market to meet this need.

DETAILS

Academy X^i Web Development

Description

Demand for Web Development skills is increasing significantly across most industries. Web development skills are versatile and being adept at them can boost your career prospects as a developer and in tech-adjacent fields such as Marketing, Design, Product Management, and more.

This course will teach you how to build a fully functioning, interactive website from scratch. In 12 weeks, you will learn HTML, CSS and JavaScript—the trifecta of skills that every Front-End Web Developer needs. In addition, you will gain exposure to the broader technology community and establish your portfolio of relevant and functional web pages to demonstrate to potential employers.

This course will help you get a solid foundation of in-demand coding skills and develop the confidence to proceed further into the world of web development.
